

ABSTRACT OF THE DISCLOSURE

The present invention relates to an optical module which can be produced by an easy process and at low cost and a method for
5 fabricating the optical module. An optical module 100 includes a die pad 101, a plurality of leads 102, and a first platform 110 and a second platform 120 disposed on the die pad 101. At least an optical fiber 113 is fixed to a first platform body 111 and at least a light emitter 124 adapted for generating optical signals to be transmitted through the
10 optical fiber 113 is mounted on a second platform body 121.
